INTRODUCTION

Thank you for purchasing a quality Mira Zest Electric Shower. To enjoy the full potential of your new shower, please take time to read this guide thoroughly, and keep it handy for future reference.

Mira Zest electric showers have separate controls for power selection and for temperature/flow adjustment. A unique flow regulator stabilises any temperature changes caused by water pressure fluctuations, which can result from taps being turned on or off or toilets being flushed.

Products covered by this guide:

Mira Zest 7.5 A 7.5 kW 240 V AC (6.9 kW 230 V AC) heater. Available in a white finish.

Mira Zest 8.5 A 8.5 kW 240 V AC (7.8 kW 230 V AC) heater. Available in a white finish.

Recommended Usage	
Domestic	✓
Light Commercial	✓
Heavy Commercial	✘
Healthcare	✘

If you experience any difficulty with the installation or operation of your new shower control, then please refer to **"Fault Diagnosis"**, before contacting **Kohler Mira Limited**.
Our telephone and fax numbers can be found on the back cover of this guide.

IMPORTANT SAFETY INFORMATION

Warning!

1. Products manufactured by us are safe and risk-free, provided that they are installed, used and maintained in good working order, in accordance with our instructions and recommendations.
2. THIS APPLIANCE **MUST** BE EARTHED.
3. This appliance is intended to be permanently connected to the fixed wiring of the mains system and must be provided with means for disconnection that is incorporated into the fixed wiring in accordance with the relevant local wiring regulations.
4. **DO NOT** twist the individual cable cores of the live and neutral conductors, as this will prevent them from entering the terminal block.
5. Make sure that any pipework that could become frozen is properly insulated.
6. **DO NOT** switch the shower on if there is a possibility that the water in the shower is frozen. The shower must not be fitted where it may be exposed to freezing conditions.
7. **DO NOT** connect the outlet of the shower to any tap, control valve, trigger handset or showerhead other than those specified for use with this shower. Only Kohler Mira recommended accessories should be used.
8. If water leaks from the pressure relief valve, maintenance will be required before the appliance can be safely used.
9. There are no user-serviceable components beneath the cover of the appliance. Only a competent tradesperson should remove the cover.
10. If any of the following conditions occur, isolate the electricity and water supplies and refer to **To contact us**, on the back page of this guide.
    - The cover is not correctly fitted and water has entered the appliance case.
    - The case is damaged.
    - The appliance begins to make an odd noise, smell or smoke.
    - The appliance shows signs of a distinct change in performance, indicating a need for maintenance.
    - The appliance is frozen.
11. Isolate the electrical and water supply before removing the cover.
12. Mains connections are exposed when the cover is removed.
13. Refer to the wiring diagram before making any electrical connections.
14. Make sure all electrical connections are tight, to prevent overheating.
15. This product is not suitable for areas with very high humidity (i.e steam rooms). Please consult your installer.

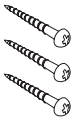
Caution!

1. **Read all of these instructions and retain this guide for later use.**
2. Pass on this guide in the event of change of ownership of the installation site.
3. Follow all warnings, cautions and instructions contained in this guide, and on or inside the appliance.
4. The electrical installation must comply with BS 7671 (commonly referred to as the IEE Wiring Regulations) and all relevant building regulations, or any particular regulation or practice specified by the local electricity supply company.
5. This is a high power unit; it is essential to contact your electricity supply company to ensure that the electricity supply is adequate for the purpose.
6. The plumbing installation must comply with all national or local water regulations and all relevant building regulations, or any particular regulation or practice specified by the local water supply company.
7. This appliance is not thermostatic and can produce scalding temperatures if not operated in accordance with the instructions given in this manual.
8. This shower is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning the use of the shower by a person responsible for their safety. Children should be supervised to ensure that they do not play with the shower.
9. When this appliance has reached the end of its serviceable life, it should be disposed of in a safe manner, in accordance with current local authority recycling, or waste disposal policy.

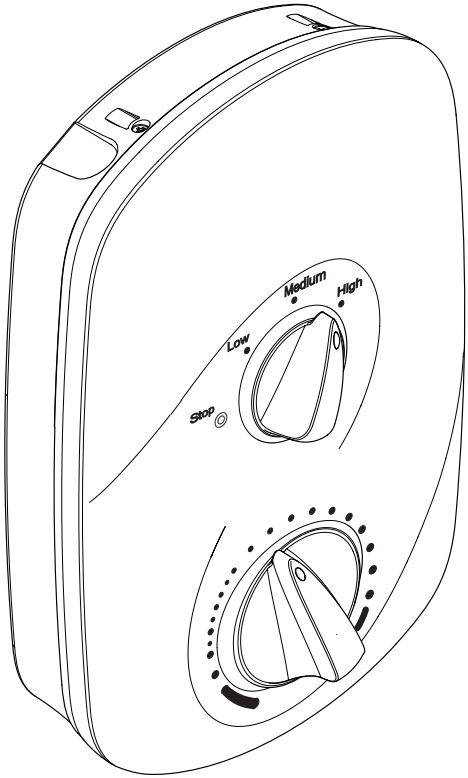
PACK CONTENTS

☑ Tick the appropriate boxes to familiarise yourself with the part names and to confirm that the parts are included.

☐ 3 x Wall Plugs



☐ 3 x Fixing Screws



☐ 1 x Mira Zest Electric Shower

Documentation

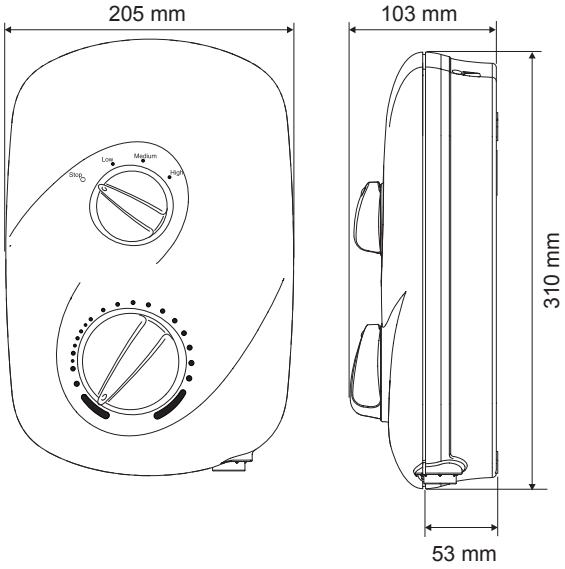
☐ 1 x Installation and User Guide

☐ 1 x Installation Template

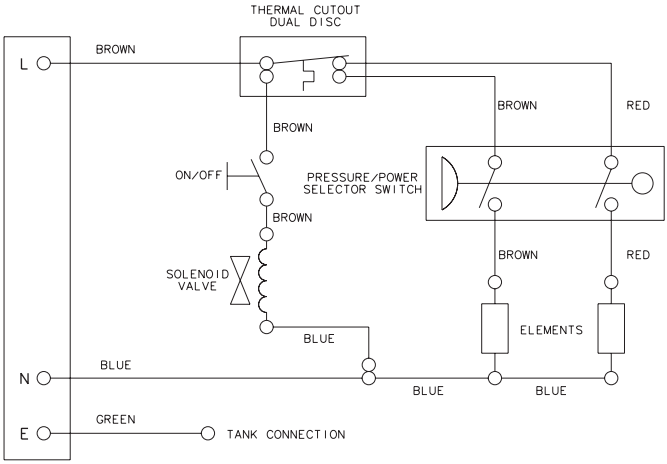
☐ 1 x Guarantee Brochure

SPECIFICATIONS

Dimensions



Wiring Diagram



Plumbing

1. Minimum maintained inlet pressure for satisfactory operation: 0.7 bar (70 kPa)
2. Maximum static inlet pressure: 10 bar (1000 kPa)
3. Minimum static pressure to keep the flow valve closed: 0.5 bar (50 kPa)

Electrical

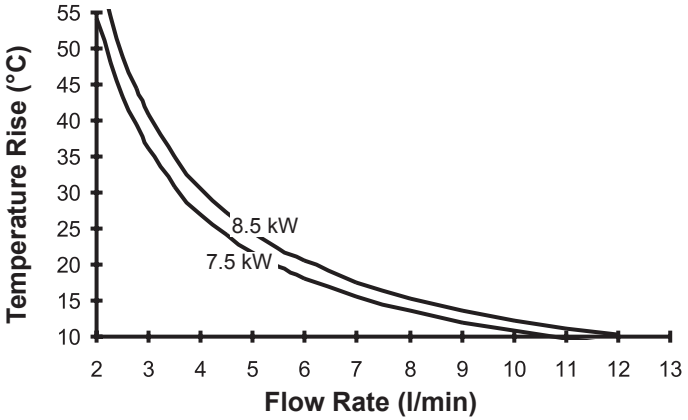
1. The appliance requires a 40 Amp fuse.
2. The terminal block will accept cable up to 16 mm2.

Standards and Approvals

1. This Mira Zest shower complies with all the relevant directives for CE marking.

Flow Rate Graph

1. These curves are for the specified outputs at 240 V.
2. All appliance heating elements have a manufacturing tolerance. Flow rates may be above or below those shown on the flow rate graph.
3. The left-hand axis shows temperature rise.
   Temperature rise = (Showering temperature) - (Supply water temperature)



Example: For the Mira Zest 8.5 kW on full power setting with an incoming water supply at 10°C and a showering temperature at 42 °C, the temperature rise is 32 °C. The flow rate is therefore, 4 l/min.

INSTALLATION REQUIREMENTS

Plumbing

1. The Mira Zest 7.5 kW and 8.5 kW electric showers are designed to operate with a **minimum maintained inlet pressure of 0.7 bar (70 kPa)** up to a **maximum static inlet pressure of 10 bar (1000 kPa)**.
2. The appliance is normally connected to the cold water mains-fed supply. However, the water supply can be taken from a cold water storage cistern, provided there is a minimum maintained inlet head of water of 7 metres (the vertical distance from the base of the cold water storage cistern to the shower fitting handset). To reduce pressure losses and fluctuations, the cistern-fed water supply must be independent from other supply draw-offs, and should avoid long horizontal pipe runs and use swept bends rather than 90° elbows. For further advice please refer to the back cover of this guide for Mira Showers contact telephone and fax numbers.
3. The appliance is suitable for installation within the shower area. It is fitted with a pressure relief device and must be positioned over a water catchment area with the controls at a convenient height for the user. The shower fitting should be positioned so that it discharges down the centre line of the bath, or across the opening of a shower cubicle, and must be directed away from the appliance.
4. The appliance is fitted with an inlet connector assembly that is designed to accept plumbing supplies from the top or bottom. The water supply can be fed with 15 mm pipe or 10 mm microbore pipe, suitably adapted into the inlet connector assembly. If 10 mm microbore is used, then an allowance for increased pressure loss must be made to ensure that the minimum maintained inlet pressure is achieved.
5. **Do not** fit the appliance to the wall and tile up to the case. The appliance must be fitted onto a finished flat and even wall surface. Otherwise, difficulty may be encountered when fitting the cover, and subsequent operation of the unit could be impaired (small pillars moulded on to the back of the case allow air circulation).
6. Use only the inlet connector assembly supplied with the appliance. **Do not** use any other types of fitting.
7. Refrain from applying excessive force when making any connections. Always provide mechanical support when making the plumbing connections.
8. This appliance is not designed to be plumbed directly from the rear. For a rear-entry supply, add an elbow to the supply pipe and connect it as a rising or falling supply.
9. **Do not install the appliance in a position where it may become frozen.** The shower unit must not be fitted where it may be exposed to freezing conditions. The shower unit must not be used if you suspect it may be frozen.

10. We recommend that a non-restrictive (free-flowing) isolating valve is fitted in the cold water supply pipe to allow the complete maintenance of the appliance. **Do not** use a valve with a loose washer plate (jumper) as this can lead to a build up of static pressure.

11. To avoid damage to the case when soldered fittings are used, pre-solder the pipework and fittings before connecting them to the inlet stub.

12. Supply pipework MUST be flushed to clear debris before connecting the appliance.

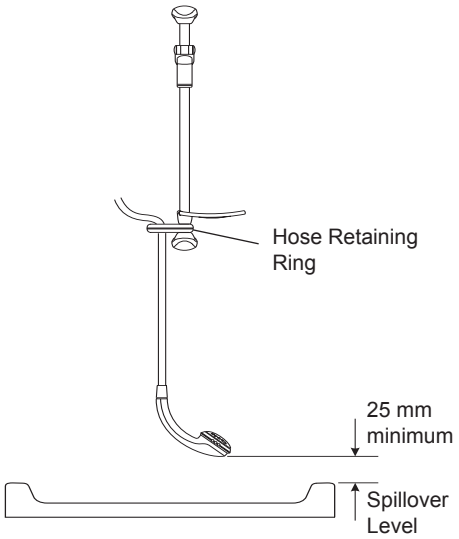
13. The appliance is fitted with a 1/2" BSP male outlet thread, to accept a Mira Zest shower hose.

14. When installed in very hard water areas (above 200 ppm temporary hardness) your installer may advise the installation of a water treatment device, to reduce the effects of limescale formation. Appliance malfunction due to excessive limescale formation is not covered by the manufacturer's guarantee. Your local water company will be able to advise on the hardness of water in your area.

15. A hose retaining ring is supplied to prevent the handset from dropping below the spillover level of the bath or shower, which could lead to contamination from back-siphonage.

The supplied hose retaining ring should meet the majority of user requirements for shower installations with flexible outlet fittings. However, there will be occasions when the hose retaining ring will not provide a suitable solution. In these instances an outlet double checkvalve **must** be fitted. This will increase the required supply pressure typically by 0.1 bar (10 kPa).

Double checkvalves, fitted in the inlet supply to the appliance, cause a pressure build-up, which could exceed the maximum static inlet pressure for the appliance.

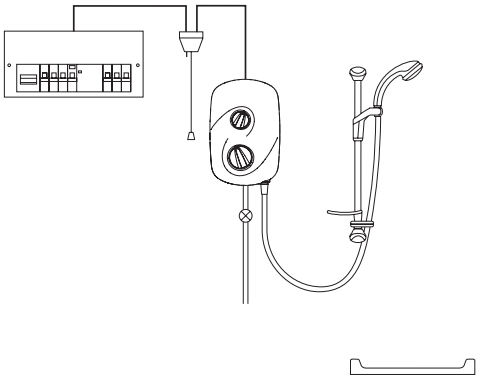


16. Avoid layouts where the shower hose will be sharply kinked. This may reduce the life of the hose.

Electrical

1. In a domestic installation, the rating of the electricity supply company fuse and the consumer unit must be adequate for the additional demand. This is a high-power appliance and it is essential to contact your electricity supply company to ensure that the supply is adequate for the appliance. Voltage drop due to local heavy demand will reduce the performance of the shower.
2. The appliance **must be earthed** by connecting the supply-cable earth conductor to the earth terminal.

   Supplementary bonding: Within the bathroom or shower room, all accessible conductive parts of electrical equipment and extraneous conductive parts that are likely to introduce earth potential, must be electrically bonded to earth using a minimum cable size of 4.0 mm^2 if the cable is not mechanically protected (2.5 mm^2 if mechanically protected).
3. The minimum cable size (cross-sectional area) must conform to BS7671.
4. To obtain full advantage of the power provided by this unit, use the shortest possible cable route from the consumer unit to the shower.
5. A 30 mA residual current device (RCD) should be fitted. This may be part of the consumer unit or a separate unit.
6. A separate, permanently connected supply must be taken from the consumer unit to the appliance through a double-pole switch, which has a minimum 3 mm contact separation. The switch can be a ceiling mounted pull-cord type within the shower room, or a wall mounted switch in an adjacent room.
7. **DO NOT** twist the individual cable cores of the live and neutral conductors, as this will prevent them from entering the terminal block.
8. **DO NOT** exert strain on the terminal block.
9. **DO NOT** turn-on the electrical supply until the plumbing has been completed.



Plumbing and Electrical Schematic

INSTALLATION

Warning! Isolate the electrical and water supplies before installing the shower.

1. Decide on a suitable position for the appliance (minimum distance of 200 mm from the ceiling to allow for cover fit and removal). The position of the appliance and the shower fittings must provide a minimum gap of 25 mm between the spill-over level of the shower tray/bath and the handset. This is to prevent backsiphonage

2. Put the installation template on the wall and mark the positions of the **top two** fixing holes. Ensure that there are sufficient lengths of supply pipe and electrical cable to reach the connection points as shown on the template.

3. Remove the installation template and drill the **top two** fixing holes. Insert the supplied wall plugs.
   Caution! Do not drill into cables or pipes in the wall.

4. **Thoroughly flush the supply pipe.**

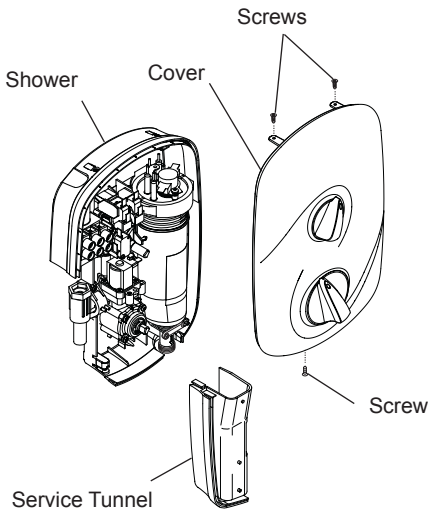
5. On the shower, turn both knobs to the full anti-clockwise position.

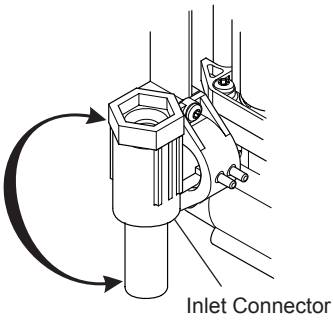
6. Remove the three screws that hold the cover on the shower and remove the cover.

7. Remove the service tunnel from the shower.

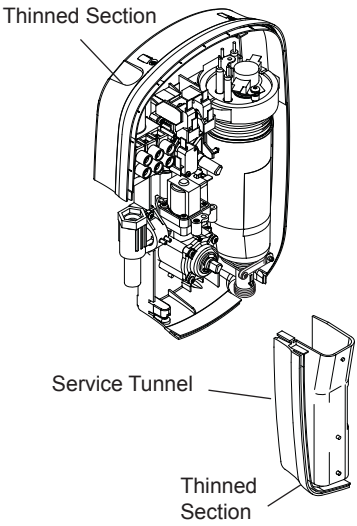
8. Determine the direction of the incoming water supply: falling (entering the shower from the top), or rising (entering the shower from the bottom).
   Do not use an incoming supply entering the shower directly from the back. Add an elbow to the supply pipe and connect it as a rising or falling supply.

9. Rotate the inlet connector to suit the direction of the incoming water supply.





10. The case has thinned sections that can be removed to allow entry of the supply pipe and electrical cables. Remove the top thinned section of the case for a falling supply, or remove the bottom thinned section of the service tunnel for a rising supply.

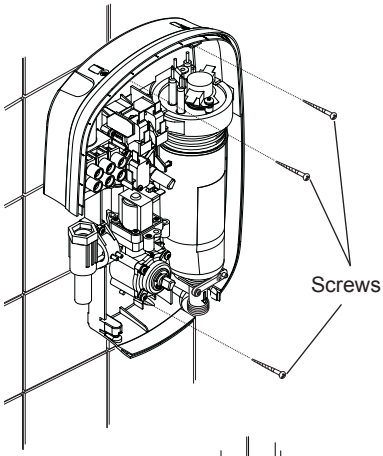


11. Do not remove any case if the electrical cables enter from the back.

12. Secure the shower to the wall **loosely** through the top two fixing holes, using the supplied screws.

13. Mark the position of the bottom fixing hole.

14. Remove the shower from the wall. Drill the bottom fixing hole and insert the supplied wall plug.

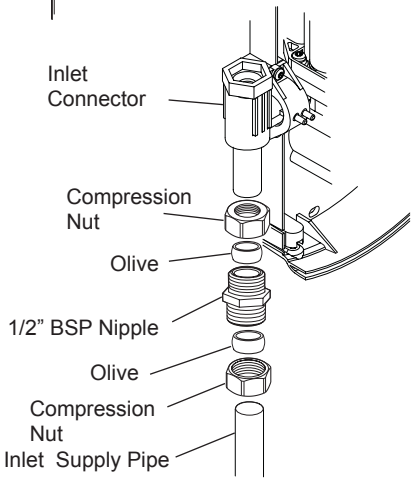


15. Thoroughly flush the mains-fed cold water supply pipe.

Caution! The supply must be clean and free from debris BEFORE connecting the appliance.

16. Replace the shower on the wall and secure through the three fixing holes, using the supplied screws.

17. Connect the inlet supply pipe to the inlet connector using a 1/2" BSP nipple with compression nuts and olives (shown) or a push-fit connector.



18. Bring the electrical cables into the case.

19. Strip back sufficient of the outer cable insulation to enable routing to terminal block.

20. Fit an earth sleeve to the earth wire.

21. Loosen the screws in the terminal block and insert the bare wires into the clamps.
L (Live) = Brown wire
E (Earth) = Green sleeved wire
N (Neutral) = Blue wire
Note! Do not twist the cores of the wires or strain the cables to make them reach the terminal block.

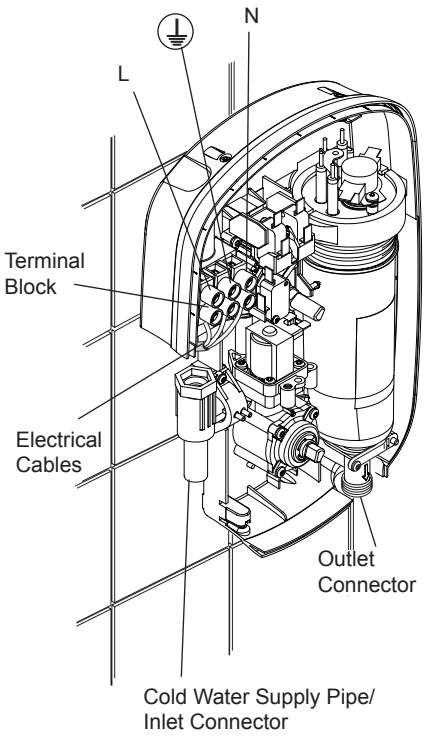
22. Connect the conductors firmly into the terminal block. Make sure that the bare cores of each conductor are securely trapped within each conductor clamp.

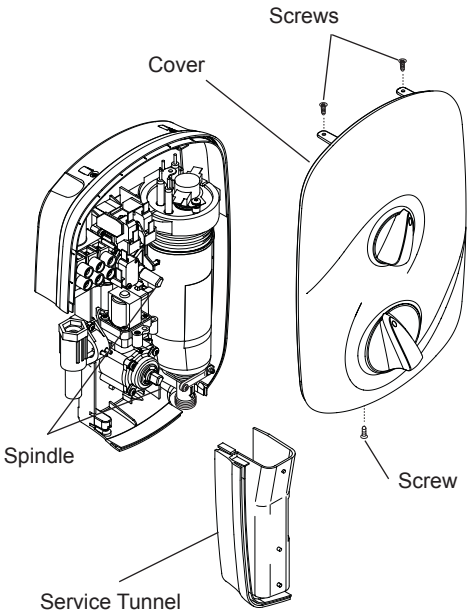
23. If necessary, fit an earth bonding clamp to the supply pipe and ensure that the bonding complies with the relevant regulations in force at the time of installation.

24. Replace the service tunnel.

25. Replace the cover. If the cover does not fit easily, rotate the knobs slightly so that they fit onto the spindles. Do not force the cover.

26. Tighten the three cover screws.





COMMISSIONING

If you are unsure how electric showers work, please read through the **Operation** section before continuing.

1. Make sure that the **TOP** control knob is in the **'STOP'** position and that the electrical supply has been isolated.
2. Turn the **BOTTOM** control knob fully anticlockwise to the full cold position.
3. Turn the water supply fully on at the isolating valve, check that water is not leaking from the bottom of the case.
4. Switch on the electrical supply at the double pole switch.
5. Turn the **TOP** control knob to the **'LOW'** position. Check that water flows freely from the shower within a few seconds. If not, refer to the **Maintenance** section. The water from the handset will be at full force and at a cool temperature.
6. Turn the **BOTTOM** knob slowly clockwise. As the knob is rotated the flow will be reduced and the temperature will remain cool - this shows that the flow regulator assembly is operating correctly. Return the knob anticlockwise to full cold position.
7. Turn the **TOP** knob to the **'MEDIUM'** position. The temperature of the water should rise slightly. Allow a few seconds for the warm water to reach the handset - this shows that the '**MEDIUM**' power setting is operating correctly.
8. Turn the **TOP** knob to the **'HIGH'** position. The temperature of the water will rise further - this shows that the full power setting is operating correctly.
9. Set the shower temperature by rotating the **BOTTOM** knob as necessary. Turn the knob clockwise for hotter water and anticlockwise for cooler water.

   Note! When the temperature is changed the flow rate will change.
10. When the required temperature is reached, turn to the **STOP** position to stop the flow. Water may continue to flow from the handset for a few moments during shut-down, as water is purged from the tank. Isolate the power at the double pole switch.
11. A small amount of water may be retained in the shower fitting after the shower control has been turned off. This may drain over a few minutes.

    Note! A slight hissing sound may be heard from the appliance during operation. High mains water pressure and high shower temperatures will effect the tone. This is quite normal when the shower is in use.

OPERATION

Advice to Users

Note! Read the **Important Safety Information** section first.

Warning! The showerhead must be de-scaled regularly to make sure it does not become blocked. See the shower fitting Installation and User Guide for more information.

1. Electric showers work by taking in cold water and passing it over the heating elements contained in the tank inside the shower.
2. The showering temperature is adjusted by turning the temperature control knob, which varies the flow of cold water across the elements. The slower the rate of flow, the warmer the water, and vice versa. The holes in the spray plate of the shower handset should always be kept clean to maintain a consistent flow and stable shower temperatures.
3. The appliance is designed to stabilise temperature changes caused by water pressure fluctuations. These fluctuations can be caused by taps being turned on or off, or toilets being flushed. Under such conditions, average shower temperatures will be held within a 6 °C range, provided that the minimum required pressure is maintained.
4. Seasonal changes in the temperature of the incoming cold water supply and/or fluctuations in mains electrical voltage will effect the temperature of the water. Adjust the temperature knob as necessary to compensate.
5. The shower requires a minimum maintained/running pressure of 0.7 bar (70 kPa) to operate. At pressures above 0.7 bar (70 kPa), the shower will minimise the temperature fluctuations caused when other draw-off points are used. If the flow rate drops below an acceptable level, the heating element inside the shower will turn off, resulting in a cold shower.
6. If the water temperature reaches an unsafe level, the thermal switch assembly turns off the heating elements. As the water temperature falls the elements will be turned on. The switch will cycle on/off/on if the flow rate is not increased and the temperature of the shower reduced.
7. Check the shower temperature before entering the shower. The previous user may have selected a **different** temperature setting.
8. When the shower is first turned on, or the temperature setting is changed, there will be a slight delay before the water temperature changes.

Operation Instructions

To turn the shower on

1. Switch on the electrical supply at the double pole switch.
2. Turn the power knob to **High**. Wait 15-20 seconds for warm water to reach the handset.

   For electrical economy, set the power knob to **Medium**. This setting will provide sufficient power when the supply water temperature is warmer, such as in the summer.

   For an unheated shower, set the power knob to **Low**.

To set the shower temperature

1. Set the shower temperature by rotating the temperature knob as necessary. Turn the knob clockwise for hotter water and anticlockwise for cooler water. Wait 10–15 seconds for the adjusted temperature to reach the handset.

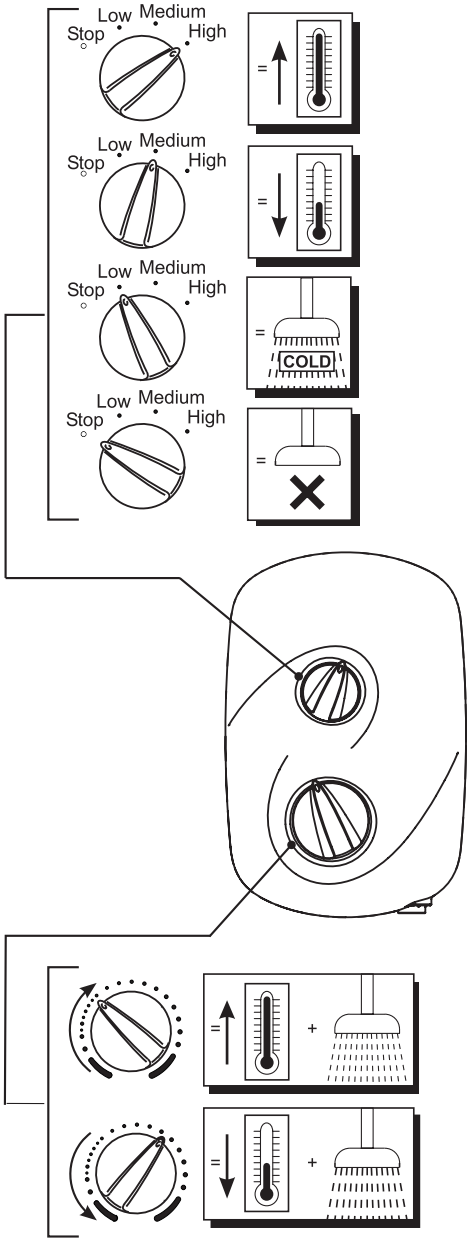
   Note! It is normal for the flow rate to change when the temperature is changed.

   Note! If the water temperature cycles between hot and cold, the temperature is set too high. This is causing the thermal switch to turn off the heating element to reduce the water temperature. Turn the temperature knob anticlockwise to reduce the water temperature.

To turn the shower off

1. Turn the power knob to **Stop**.

   Note! A small amount of water may continue to flow from the handset for a few moments.
2. **Switch off** the electrical supply at the double pole switch.



FAULT DIAGNOSIS

The troubleshooting information tabled below gives you details on probable causes and remedies should difficulties be encountered whilst the shower is in operation.

Warning! There are no user serviceable components beneath the cover of the appliance.

ONLY A COMPETENT TRADESPERSON SHOULD REMOVE THE FRONT COVER!

Malfunction	Cause	Remedy
Shower is too hot during the summer.	The incoming water is warmer in the summer, so the shower power setting is too high.	Turn the power knob to **Medium** and adjust the temperature knob until the desired temperature is reached.
Shower is too hot.	The handset sprayplate is blocked.	Regularly clean the handset sprayplate. Refer to the **Maintenance** section of the handset manual.
Turning the temperature knob does not affect the water temperature.	The handset sprayplate is blocked.	Remove and clean the handset sprayplate. Refer to the **Maintenance** section of the handset manual. If the fault persists, contact the shower installer.
The water continues to flow when the double pole switch is turned off.	Broken diaphragm.	Contact your installer to replace the flow valve assembly.
No water or very low flow rate.	The handset sprayplate is blocked. The incoming water supply stop valves, or the appliance isolating valve, is closed. The hose or handset is blocked.	Clean the handset sprayplate. Refer to the **Maintenance** section of the handset manual. Open the stop/isolating valve completely. Clear the blockage or replace the hose or handset.

(Continued. . . .)

Malfunction	Cause	Remedy
	The power is off at the double pole switch.	Switch on the power at the double pole switch.
	The fuse is blown or the MCB/RCD has been tripped, indicating a possible electrical fault.	Renew the fuse or reset the MCB/RCD. If the fault persists, contact the shower installer.
No hot water from shower, with the knobs in any position.	Other water outlets are being used during showering, causing the water pressure to drop below the minimum required.	Make sure the other water outlets, such as the washing machine or dishwasher, are not in use during showering.
	The water pressure is below the minimum required.	Make sure that the incoming water supply stop and the isolating valve are completely open. If the fault persists, contact the shower installer.
	Failure of pressure switch, micro switch or thermal switch.	Contact installer to replace faulty parts.
Temperature cycles between hot and cold.	The temperature is set too high. This is causing the thermal switch to turn off the heating element to reduce the water temperature.	Turn the temperature knob anticlockwise to reduce the water temperature.
ALL OF THE FOLLOWING REMEDIES MUST ONLY BE PERFORMED BY A COMPETENT TRADESPERSON!		
No hot water from shower, with the knobs in any position.	Insufficient water supply pressure.	Contact the local water authority.
	Failure of the pressure switch, microswitch or thermal switch.	Check the continuity of the switches, using a suitable continuity measuring device.
		Replace the switches as necessary.
	An internal wiring connection has failed.	Check the integrity of the internal wiring.
	One of the heater tank elements has failed.	Replace the heater tank.
	Switch assembly diaphragm fault, water dripping from the unit.	Replace switch assembly.

(Continued. . . .)

Malfunction	Cause	Remedy
Shower temperature cycles between hot and cold.	The temperature is set too high. This is causing the thermal switch to turn off the heating element to reduce the water temperature.	Turn the temperature knob anticlockwise to reduce the water temperature. **DO NOT TAMPER** with the thermal switch.
Turning the temperature knob does not affect the water temperature.	The flow regulator is faulty. The handset sprayplate is blocked.	Replace the flow regulator. Remove and clean the handset sprayplate. Refer to the shower fittings User Guide. If the fault persists, contact Customer Services.
No water or very low flow rate.	The handset sprayplate is blocked.	Regularly clean the handset sprayplate. Refer to the **Maintenance** section of the handset manual.
	The incoming water supply stop valves, or the appliance isolating valve, is closed.	Open the stop/isolating valve completely.
	The hose or handset is blocked.	Clear the blockage or replace the hose or handset.
	Insufficient water supply pressure.	Contact the local water authority.
	The heater tank is excessively scaled.	Replace the heater tank.
	The pilot valve is faulty.	Replace the flow regulator assembly.
	The inlet filter is blocked.	Clean the inlet filter. See the **Maintenance: Cleaning the Inlet Filter** section.
	The power is not turned on at the double pole switch.	Switch on the power at the double pole switch.
	The fuse is blown or the MCB/RCD has been tripped, indicating a possible electrical fault; for example, heater tank element failure.	Renew the fuse or reset the MCB/RCD. If the fault persists, contact Customer Services. Replace the heater tank.

(Continued. . . .)

Malfunction	Cause	Remedy
Water leaks from the bottom of the case near the outlet, and there is no flow from the handset.	The pressure relief valve in the tank has been triggered, (the shower has a pressure relief valve assembly that works to reduce the damage if the outlet is blocked or the unit is frozen). When the relief valve operates a small rubber ball is ejected.	Resolve the blocked outlet, and replace the tank assembly.
The water cannot be turned off.	The pilot valve is faulty. Broken diaphragm. The supply pressure is below the minimum requirement.	Replace the flow regulator assembly. Replace the flow regulator assembly. Contact the local water authority. Check the static water pressure. Note that the static pressure may fall below minimum requirement when other appliances are drawing water; for example, the dishwasher or washing machine.

MAINTENANCE

Any maintenance must be carried out by a qualified tradesperson, following the instructions provided. Before replacing any parts, ensure that the underlying cause of the malfunction has been resolved.

Warning! There are no user-serviceable components beneath the cover of the appliance. Only a competent tradesperson should remove the cover.

Cleaning

Many household and industrial cleaners contain abrasives and chemical substances that can damage the finish of your shower. Only clean the shower and fittings with a mild washing-up detergent or soap solution, and then wipe them dry with a soft cloth.

Cleaning the Inlet Filter

Warning! Isolate the electrical and water supplies before removing the cover.

1. Remove the three screws that hold the cover on the shower and remove the cover.

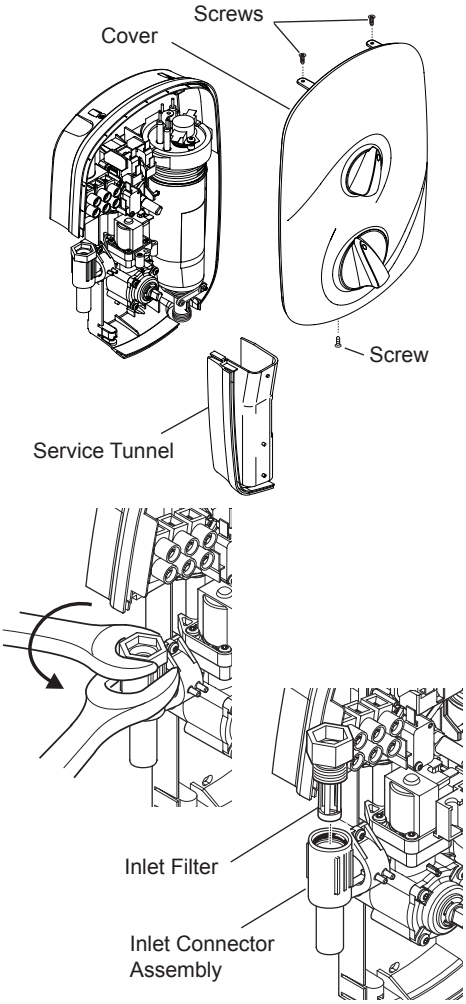
2. Remove the service tunnel from the shower.

3. Use a suitable spanner to remove the filter from the inlet connector assembly. Hold a wrench across the flats of the inlet connector assembly to prevent damage to the connector, whilst removing the strainer.

4. Remove the inlet filter.

5. Clean the inlet filter with a stiff brush. If necessary, use a kettle descalent in accordance with the manufacturer's instructions.

6. Refit the components in reverse order.



SPARE PARTS

Spare Parts List

406.27	Filter
439.75	Inlet Connector Assembly
439.76	Clamp Bracket Pack (components identified ‘A’)
439.77	Flow Reg Assembly 7.5/8.5 kW
439.79	Switch Assembly, Rotary
439.81	Cover Assembly, Zest
439.88	Seal Pack (components identified ‘B’)
439.89	Screw Pack (components identified ‘C’)
439.90	Thermal Trip Assembly
439.91	Heater Tank Assembly 7.5 kW
1798.054	Heater Tank Assembly 8.5 kW

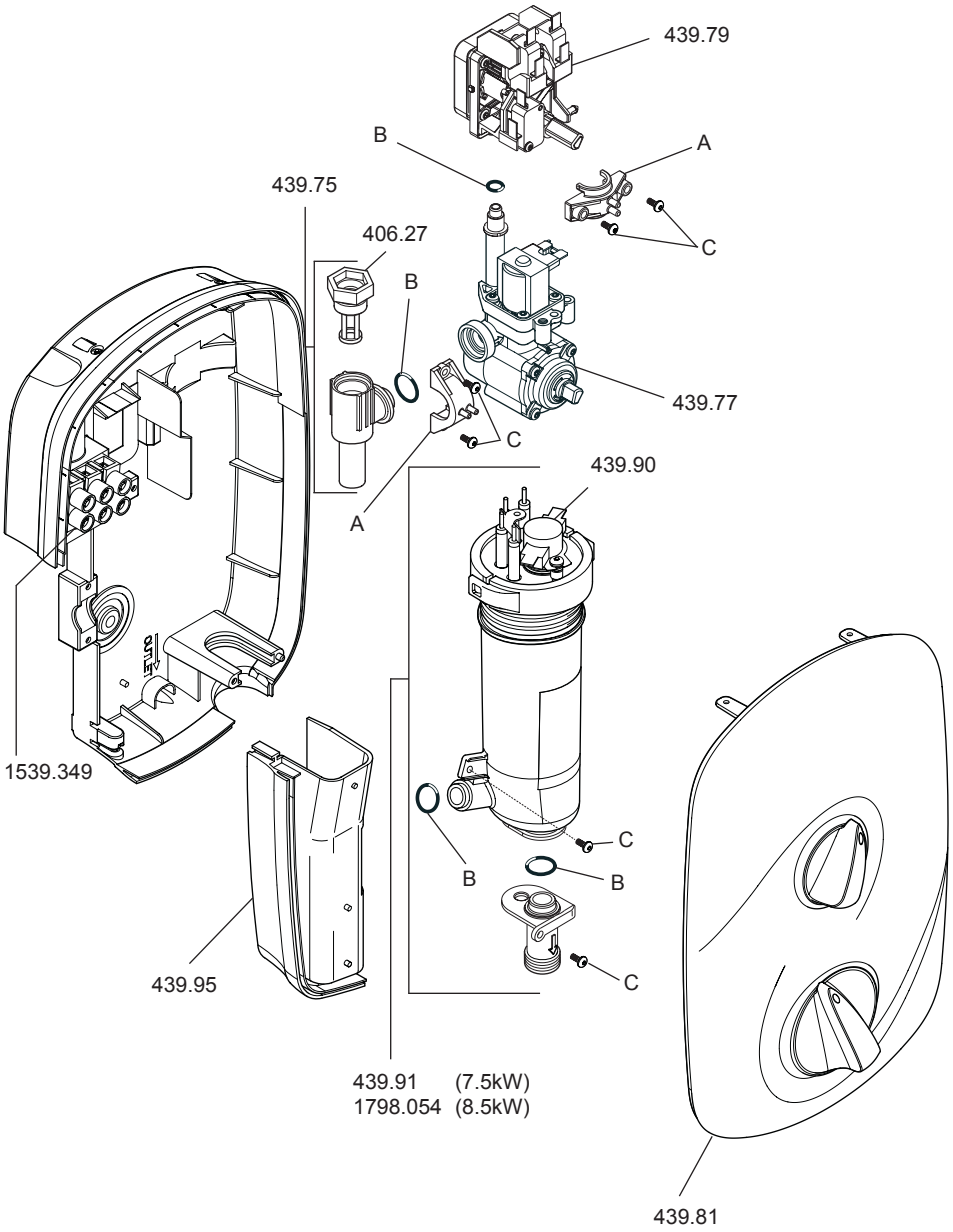
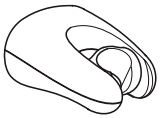
Spare Parts Diagram



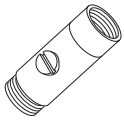
ACCESSORIES

Genuine Mira accessories can be purchased direct from Customers Services (our contact details can be found on the back cover of this guide) or from approved stockists or merchants.

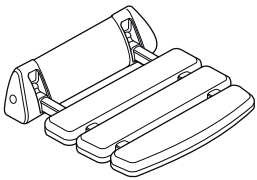


Logic Showerhead Holder
White - 2.1605.149
White/Chrome - 2.1605.150
An alternative to the traditional slide bar. Often a useful addition when positioned for the smaller members of the family.

Mira Standard Grab Bars
300 mm - 2.1605.070
450 mm - 2.1605.071
600 mm - 2.1605.072
Premium grade, highly polished, stainless steel grab bars.
Note! Must be installed onto a solid wall.



Outlet Double Check Valve (DCV-H)
Chrome - 1.0.110.55.1
An outlet double check valve, designed to prevent the back flow or back-siphonage of potentially contaminated water, through shower controls which are fitted with a flexible shower hose as part of the outlet shower fitting.



Shower Seat
White - 2.1536.128
White/Chrome - 2.1536.129
For use in or out of the showering area. Folds up when not in use. Maximum User Weight - 127 kg (20 stone) **Note!** Must be installed onto a solid wall.

Premium Shower Seat
White/Chrome - 2.1731.001
Grey/Chrome - 2.1731.002
Stylish, slim-line and robust shower seat for use in or outside of the shower area. Folds up when not in use. Maximum User Weight - 150 kg (23.5 stone) **Note!** Must be installed onto a solid wall.

NOTES

NOTES

CUSTOMER SERVICE

Guarantee

Your product has the benefit of our manufacturer's guarantee which starts from the date of purchase.

To activate this guarantee, please return your completed registration card, visit our website or free phone 0800 0731248 within 30 days of purchase (UK only).

Within the guarantee period we will resolve defects in materials or workmanship, free of charge, by repairing or replacing parts or product as we may choose.

This guarantee is in addition to your statutory rights and is subject to the following conditions:

- The guarantee applies solely to the original installation under normal use and to the original purchaser only. The product must be installed and maintained in accordance with the instructions given in this user guide.
- Servicing must only be undertaken by us or our appointed representative. **Note!** if a service visit is required the product must be fully installed and connected to services.
- Repair under this guarantee does not extend the original expiry date. The guarantee on any replacement parts or product ends at the original expiry date.
- For shower fittings or consumable items we reserve the right to supply replacement parts only.

The guarantee does not cover:

- Call out charges for non product faults (such as damage or performance issues arising from incorrect installation, improper use, inappropriate cleaning, lack of maintenance, build up of limescale, frost damage, corrosion, system debris or blocked filters) or where no fault has been found with the product.
- Water or electrical supply, waste and isolation issues.
- Compensation for loss of use of the product or consequential loss of any kind.
- Damage or defects caused if the product is repaired or modified by persons not authorised by us or our appointed representative.
- Routine maintenance or replacement parts to comply with the requirements of the TMV 2 or TMV 3 healthcare schemes.
- Accidental or wilful damage.
- Products purchased ex-showroom display.

What to do if something goes wrong

If your product does not work correctly refer to this manual for fault diagnosis and check that it is installed and commissioned in accordance with our instructions. If this does not resolve the issue, contact us for help and advice.

Extended Guarantees

A selection of protection plans are available that enable you to cover repair bills (excludes Eire). Ring 01922 471763 for more details.

Helpdesk Service - Ring our Customer Services Team for product advice, to purchase spare parts or accessories or to set up service visit. You can contact us via phone or e-mail, details below. Please provide your model name, power rating (if applicable) and date of purchase.

Mira Showers Website (www.mirashowers.co.uk)

Visit our website to register your guarantee, download user guides, diagnose faults, purchase our full range of accessories and popular spares, or request a service visit.

Spares and Accessories - We hold the largest stocks of genuine Mira spares and accessories. Contact us for a price or visit our website to purchase items from our accessory range and popular spares.

Service/Repairs - No one knows our products better than our nationwide team of Service Technicians. We can carry out service or repair work to your product both during and after the guarantee period. Ask about our fixed price service repairs.
